Tsiami Panoraia 3350

---

## VERSIONS HISTORY

---

Date	Version	Description	Author
29/05/2021	2.0	This is the final version of the report for the AdvancedTextToSpeech software application	L. Vlaxopoulos G. Krommydas P. Tsiami

## 1 Introduction

---

This document provides information concerning the <2.0> sprint of the project.

### 1.1 Purpose

---

FreeTTS is an open source speech synthesis system which allows texts to be transformed into sound. It is highly used in audio generation applications, which are provided with the input of documents and generate the sound. The purpose of this project is to use this library, in order to convert various documents into speech. The user can load or create a new document, which can be edited. In addition, either the whole document can be transformed into speech or some selected lines of the document. Another feature of the application is to encode and decode the document, while it can be also transformed into speech. It can also record a session of the user's work, in order to replay it after finishing is work. The record can be activated and de-activated.

### 1.2 Document Structure

---

The rest of this document is structured as follows. Section 2 describes out Scrum team and specifies this Sprint's backlog with the unit tests for the use cases. Section 3 specifies the main design concepts for this release of the project. Section 4 specifies the architecture of the system with its functional and non-functional requirements of this project.

## 2 Scrum team and Sprint Backlog

---

On this section are the necessary tests for the use cases, in order to achieve the excepted results from the user stories.

Test's User Story	<i>[US1] – UC1</i>
Test File Name	<i>TestOpen</i>
Test Description	<i>In this test, we test the implementation of US1. By opening a certain file from the folder with its path file as a Document object. Then we open it with the open() method. The next step is to create an array list and add some content. If the content of the array list is the same with the opened document then the results are correct and the expected.</i>

Test's User Story	<i>[US1] – UC2</i>
Test File Name	<i>TestEncode</i>
Test Description	<i>In this test, we test the implementation of US1. By opening a certain file from the folder with its path file and an encoding type (Rot13, Atbash) as a Document object. We open it with the method <code>open(doc.getFileType(),doc.getPath(),doc.getTyoecode())</code> and check if the content is encoded with a certain encoded type. If its true, then this functionality works and documents can be encoded</i>

Test's User Story	<i>[US1] – UC3</i>
Test File Name	<i>TestDecode</i>
Test Description	<i>In this test, we test the implementation of US1. By opening a certain encoded file from the folder with its path file and an encoding type (Rot13, Atbash) as a Document object. We open it with the method <code>open(doc.getFileType(),doc.getPath(),doc.getTyoecode())</code> and check if the encoded content have been decoded. If the decoded results are correct and the expected then this functionality works and encoded documents can be decoded successfully.</i>

Test's User Story	<i>[US2] – UC4</i>
Test File Name	<i>TestEdit</i>
Test Description	<i>In this test, we test the implementation of US2. As a certain document has opened as Document object, we add new content into a string and add it to the document. If the string has been added successfully into the document, then when we re-open the document the line should be appear inside the document</i>

Test's User Story	<i>[US3] – UC5</i>
Test File Name	<i>TestSave</i>
Test Description	<i>In this test, we test the implementation of US3. We create an empty document as a Document object and add some lines into with an array list. Then we save the file with the content into the folder with its path file. If the save was successful, then we check if the content</i>

	<i>is what was placed in the file at first</i>
--	--

Test's User Story	<i>[US4] – UC6</i>
Test File Name	<i>TestPlayAllContents</i>
Test Description	<i>In this test, we test the implementation of US4. We open a certain document from the folder with its path file. Then we call the FakeTTSTFacade object so we can play all the contents of the file through the audio manager. If the opening and the speech convert was successful, then the method's functionality is correct. If a document is empty, then we add some content and repeat the same process.</i>

Test's User Story	<i>[US5] – UC7</i>
Test File Name	<i>TestPlayLine</i>
Test Description	<i>In this test, we test the implementation of US5. We open a certain document from the folder with its path file. Then we call the FakeTTSTFacade object so we can play a certain part of the content. On this occasion we check for the first line. If the opening and the speech convert was successful, then the method's functionality is correct.</i>

Test's User Story	<i>[US6] – UC8</i>
Test File Name	<i>TestSoundSettings</i>
Test Description	<i>In this test, we test the implementation of US6. First we create an empty document and an array list that keeps the three parameters of audio(pitch, rate, volume). We add them certain values. Then we call the FakeTTSTFacade object and set the audio manager for the document. The next step is to set the parameters the same as those into the array list. The last thing is to check if the parameters have been adjusted to those above. If so, then this functionality is successfully working.</i>

Test's User Story	[US8] – UC10
Test File Name	TestReplay
Test Description	<i>In this test we check the implementation of the US7,8,9. First we open a document from the folder as a Document object. Then we create an ActionListener array list to check later the replay session. We open as an OpenDocument object the previous Document object and we call the FakeTTSFacade object, thus using the setAudioManager(doc) method to the Document object and then convert it to speech with the DocumentToSpeech object. We add the previous process on the array list . We create another array list and add some content inside it. Then we edit the previous document that we opened and add to the ActionListener array list. The last thing to do is to use the replay method on the list and check if the actions that we used are the actual ones from the application.</i>

## 2.1 Scrum team

---

<b>Product Owner</b>	Apostolos Zarras
<b>Scrum Master</b>	....
<b>Development Team</b>	Labros Vlastopoulos, Georgios Krommydas, Panoraia Tsiami

## 2.2 Sprints

---

Sprint No	Begin Date	End Date	Number of weeks	User stories
2.0	12/03/2021	20/03/2021	1	All user stories. Beginning of project.
2.0	20/03/2021	27/03/2021	1	All user stories. End of Use Cases
2.0	27/03/2021	11/04/2021	2	All user stories. Implementation of use cases. Start of uml diagrams
2.0	11/04/2021	13/04/2021	0	All user stories. Implementation of open, save and textToSpeech functionalities
2.0	13/04/2021	14/04/2021	0	All user stories. Checking open functionality with gui and back-end interaction
2.0	14/04/2021	15/04/2021	0	All user stories. Checking tts functionality with gui and back-end interaction
2.0	15/04/2021	20/04/2021	0	All user stories. Change of gui implementation. End of use cases and use case diagrams
2.0	20/04/2021	25/04/2021	0	[US6]. Implementation of tune parameters and interaction of gui with back-end
2.0	25/04/2021	27/04/2021	0	All user stories. Fixing functionalities of tune parameters. Checking open, save, tts play all contents, tts part of contents, sound settings functionalities with gui and back-end interaction
2.0	27/04/2021	24/05/2021	4	All user stories. Final details on project. Implementation of all Junit tests
2.0	24/05/2021	28/05/2021	0	All user stories. End of project. End of Junit tests. End of Sprint Report

## 2.3 Sprint Backlog

---

- [US1] As a user I want to open a file that is stored on disk and view its contents. The application should allow me to open different kinds of files. The application should support at least Microsoft Word (.docx) and Excel (.xlsx) documents. The application should also allow me to open files with encoded contents. The application should support different encodings, including Atbash and Rot-13. So that I can edit the contents of the file and transform them to audio.
- [US2] As a user I want to be able to edit the contents of the file. So that I can produce a new version of the file that I opened.
- [US3] As a user I want to save the contents of the file that I opened on disk. The application should allow me to specify the format of the file, the encoding (if any) and the filename. So that I can store a new version of the file that I opened.
- [US4] As a user I want to transform the contents of the file which I opened, to audio. So that I can listen what is in the file instead of having to read it.
- [US5] As a user I want to select a part of the contents of the file(e.g from line X to line Y) that I opened and transform them to audio. So that I can listen only a part of the contents of the file instead of all.
- [US6] As a user I want to tune the audio parameters, i.e., the volume, the speech rate and the pitch. So that I can customize the audio to my needs.
- [US7] As a user I want to activate a recording operation that keeps track of a sequence of text to audio transformation actions/commands. So that ia can re-execute them multiple times.
- [US8] As a user I want to replay the recorded sequence of actions. So that I can listen again the contents of the file I opened.
- [US9] As a user I want to de-activate the recording operation. So that I can clean up the sequence of actions that have been recorded.

### 3 Use Cases

On this section we realize the user stories of the project and describe the use cases. As well the uml use case diagram, on how the use cases interact with the user and with its other.

FIGURE 1: USE CASE DIAGRAM

### 3.1 OpenFile

---

<b>Use case ID</b>	UC1
<b>Actors</b>	User
<b>Description &amp; Goals</b>	The use case is responsible for loading the file from the user
<b>Pre conditions</b>	1. The application is up and running
<b>Main flow of events</b>	<ol style="list-style-type: none"><li>1. The use case starts when the user presses the button "File/Open" from the application</li><li>2. The system receives the path of the file from the user, in order to open it</li><li>3. The system projects on the screen the selected file and reads the content of the file</li></ol>
<b>Alternative flow</b>	-
<b>Post conditions</b>	The file has been loaded into the application, so the user can edit it
<b>Exceptions</b>	<ol style="list-style-type: none"><li>1. If the file does not exist, then the system will project an error message</li></ol>

### 3.2 Encode

---

<b>Use case ID</b>	US2
<b>Actors</b>	User
<b>Description &amp; Goals</b>	The use case is responsible for encoding the content of the file
<b>Pre conditions</b>	The file must exist and opened from the system
<b>Main flow of events</b>	<ol style="list-style-type: none"><li>1. The use case starts when the user selects an encoding type</li><li>2. The user must select between the two types of encoding (Atbash or Rot-13)</li><li>3. The system starts the encoding of the file with the selected encoding</li></ol>

	method
<b>Alternative flow</b>	-
<b>Post conditions</b>	1. The file has been encoded with the selected method from the user
<b>Exceptions</b>	1. Projects an error message when the document is empty

### 3.3 Decode

---

<b>Use case ID</b>	UC3
<b>Actors</b>	User
<b>Description &amp; Goals</b>	The use case is responsible for decoding the content of the document
<b>Pre conditions</b>	The file must exist, with its content encoded. It must be opened from the system
<b>Main flow of events</b>	<ol style="list-style-type: none"> <li>1. The use case starts when the user selects a decoded type, while opening a document</li> <li>2. The system decodes the document</li> </ol>
<b>Alternative flow</b>	-
<b>Post conditions</b>	1. The content of the document has been decoded
<b>Exceptions</b>	-

### 3.4 EditFile

---

<b>Use case ID</b>	UC4
<b>Actors</b>	User
<b>Description &amp; Goals</b>	The use case is responsible for the edit of the loaded file from the user
<b>Pre conditions</b>	The file should be loaded in the environment of the application. Its content should be decoded
<b>Main flow of events</b>	1. The use case starts when the user presses the button "File/Edit"
<b>Alternative flow</b>	-
<b>Post conditions</b>	1. The file has been edited
<b>Exceptions</b>	-

### 3.5 SaveFile

---

<b>Use case ID</b>	UC5
<b>Actors</b>	User
<b>Description &amp; Goals</b>	The use case is responsible for saving the document in the disk
<b>Pre conditions</b>	The file must exist and be opened by the system.
<b>Main flow of events</b>	1. The use case starts when the user presses the button "File/Save" 2. The system asks the user the type of the document, the method of the encoding (if the user wants to encode) and the name of the file 3. The user gives the requested information 4. The system saves the file with the changes to disk
<b>Alternative flow</b>	-

<b>Post conditions</b>	1. The file is saved to the disk with the given information
<b>Exceptions</b>	<ol style="list-style-type: none"> <li>1. If there is a problem saving the file to the disk, then the system will project an error message</li> <li>2. If the user does not give the requested information, then the system projects an error message</li> </ol>

### 3.6 TransformContents

---

<b>Use case ID</b>	UC6
<b>Actors</b>	User
<b>Description &amp; Goals</b>	The use case is responsible for the transformation of the file content from text to speech
<b>Pre conditions</b>	The file must be loaded from the disk. It should not be empty and must be decoded
<b>Main flow of events</b>	<ol style="list-style-type: none"> <li>1. The use case starts when the user presses the button "Text To Speech/All Contents"</li> <li>2. The system converts the content of the file to speech</li> </ol>
<b>Alternative flow</b>	-
<b>Post conditions</b>	1. The content of the file has been converted to speech
<b>Exceptions</b>	<ol style="list-style-type: none"> <li>1. If the file is empty, then the system projects an error message</li> <li>2. If the system fails during the transformation of the contents to speech, then it projects an error message</li> </ol>

### 3.7 SelectAndTransform

---

<b>Use case ID</b>	UC7
<b>Actors</b>	User
<b>Description &amp; Goals</b>	The use case selects a part from the loaded file to transform it into speech
<b>Pre conditions</b>	The file has been loaded with its content
<b>Main flow of events</b>	<ol style="list-style-type: none"><li>1. The use case starts when the user pushes the button "Text To Speech/Part of Contents"</li><li>2. The user chooses from the file the lines he wants to transform into speech</li></ol>
<b>Alternative flow</b>	-
<b>Post conditions</b>	<ol style="list-style-type: none"><li>1. The line space for conversion into speech have been selected</li></ol>
<b>Exceptions</b>	<ol style="list-style-type: none"><li>1. The user has to give a valid line space. For example if the document has 10 lines and he chooses the space 5-7, then the space is valid, else if he choosethe space 11-20, then is not valid. If the user selects invalid spce line, then the system will project an error message</li></ol>

### 3.8 TuneAudioParameters

---

<b>Use case ID</b>	UC8
<b>Actors</b>	User
<b>Description &amp; Goals</b>	The use case is responsible for tuning the parameters
<b>Pre conditions</b>	The application is up and running
<b>Main flow of events</b>	<ol style="list-style-type: none"><li>1. The use case starts when the user press the button "Sound Settings"</li><li>2. The user gives the parameters desired values to the system for the volume the speech rate and the pitch</li></ol>

	3. The system tunes the parameters
<b>Alternative flow</b>	-
<b>Post conditions</b>	1. The parameters have been tuned from the desired values of the user
<b>Exceptions</b>	-

### 3.9 ActivateRecording

---

<b>Use case ID</b>	UC9
<b>Actors</b>	User
<b>Description &amp; Goals</b>	The use case activates the recording session.
<b>Pre conditions</b>	The application is up and running
<b>Main flow of events</b>	<ol style="list-style-type: none"> <li>1. The use case starts when the user press the button “Record Settings/ Activate Recording”</li> <li>2. The system starts to record the actions, the commands and the operations of the user.</li> </ol>
<b>Alternative flow</b>	-
<b>Post conditions</b>	1. The operations/actions of the user related to the system’s functionality have been saved
<b>Exceptions</b>	<ol style="list-style-type: none"> <li>1. If there is no memory storage for the recording, then project an error message</li> <li>2. If an operation, which is chosen from the user is displayed incorrectly, then display an error message and terminate the procedure</li> </ol>

### 3.10 ReplayRecording

---

<b>Use case ID</b>	UC10
<b>Actors</b>	User
<b>Description &amp; Goals</b>	The use case is responsible for replaying the recording from the user
<b>Pre conditions</b>	Has to exist a recording in the disk
<b>Main flow of events</b>	<ol style="list-style-type: none"><li>1. The use case starts when the user press the button “Record Settings/Replay recording”</li><li>2. The system play’s the recording which is been selected from the user</li></ol>
<b>Alternative flow</b>	-
<b>Post conditions</b>	<ol style="list-style-type: none"><li>1. The replay has been displayed by the system</li></ol>
<b>Exceptions</b>	<ol style="list-style-type: none"><li>1. Displays an error message if there is not a recorded file in the disk</li></ol>

### 3.11 DeActivateRecording

---

<b>Use case ID</b>	UC11
<b>Actors</b>	User
<b>Pre conditions</b>	The recording session should be enabled
<b>Main flow of events</b>	<ol style="list-style-type: none"><li>1. The use case starts when the user press the button “Record Settings/De-activate recording”</li><li>2. The system stops the recording procedure</li></ol>
<b>Alternative flow</b>	-
<b>Post conditions</b>	<ol style="list-style-type: none"><li>1. The recording session is disabled</li></ol>
<b>Exceptions</b>	<ol style="list-style-type: none"><li>1. Displays an error message if the user did not start the recording</li></ol>

## 4 Design

### 4.1 Architecture

FIGURE 2: UML PACKAGE DIAGRAM

### 4.2 Design

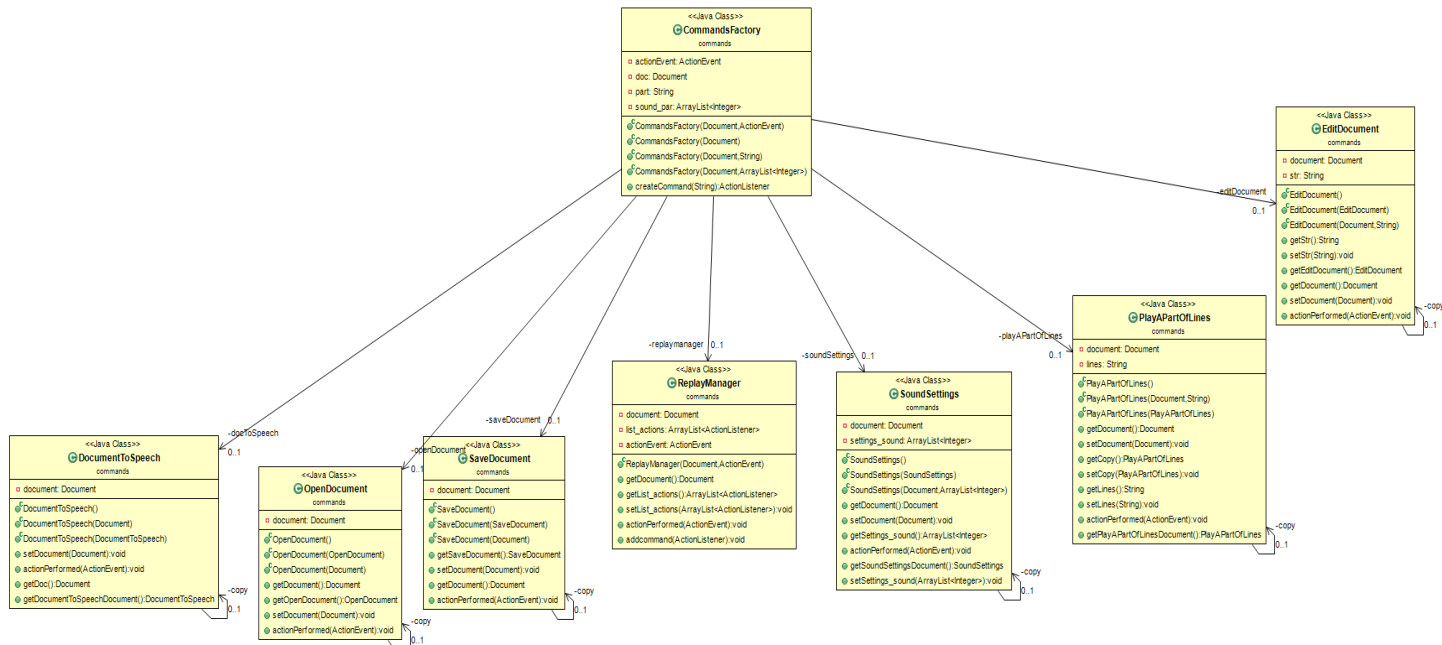

FIGURE 3: UML COMMANDS PACKAGE CLASS DIAGRAM

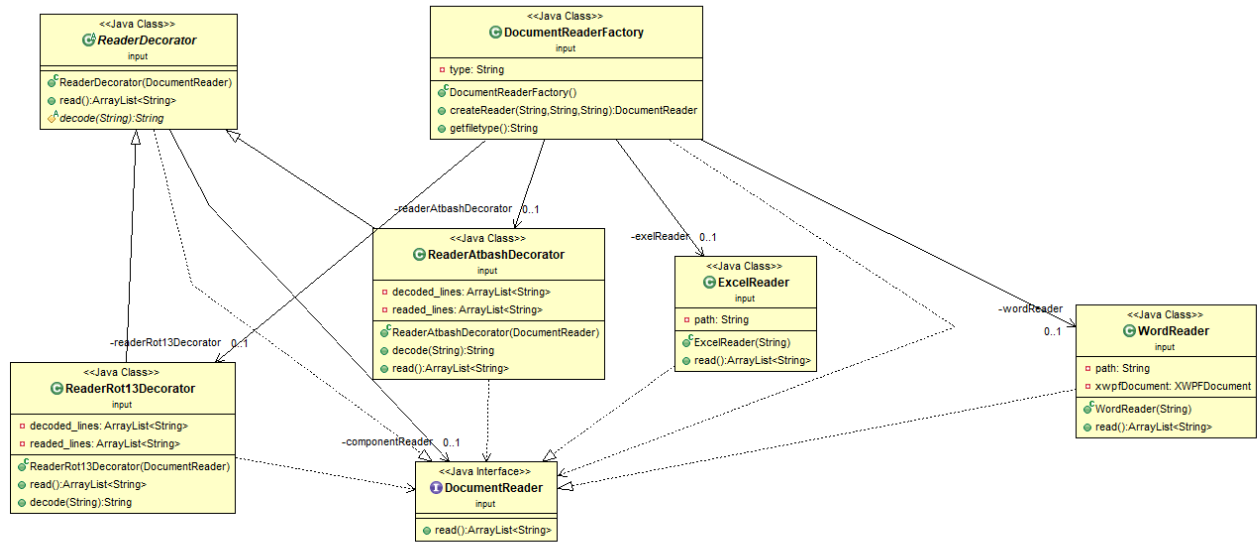

FIGURE 4: UML INPUT PACKAGE CLASS DIAGRAM

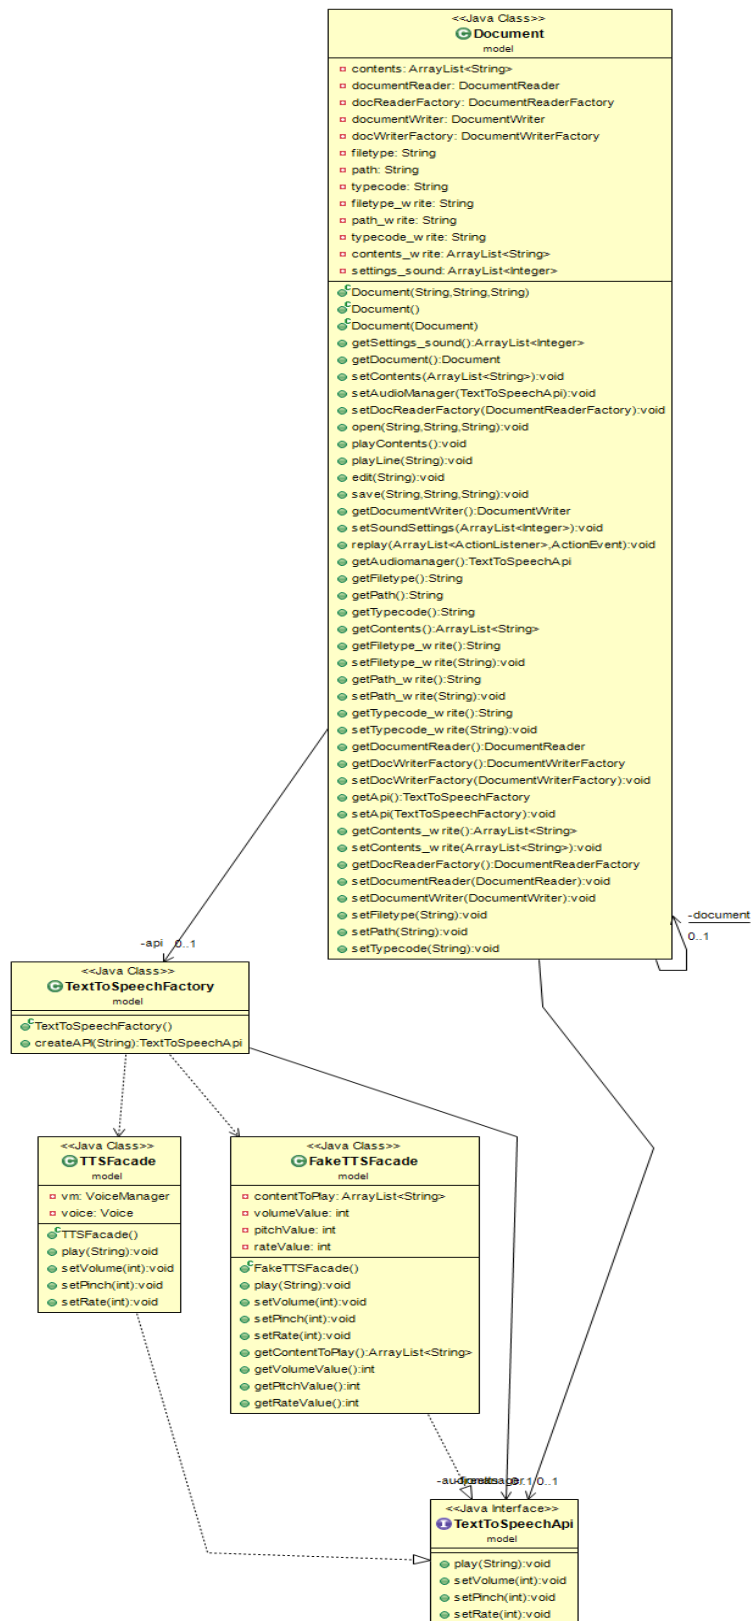

FIGURE 5: UML MODEL PACKAGE CLASS DIAGRAM

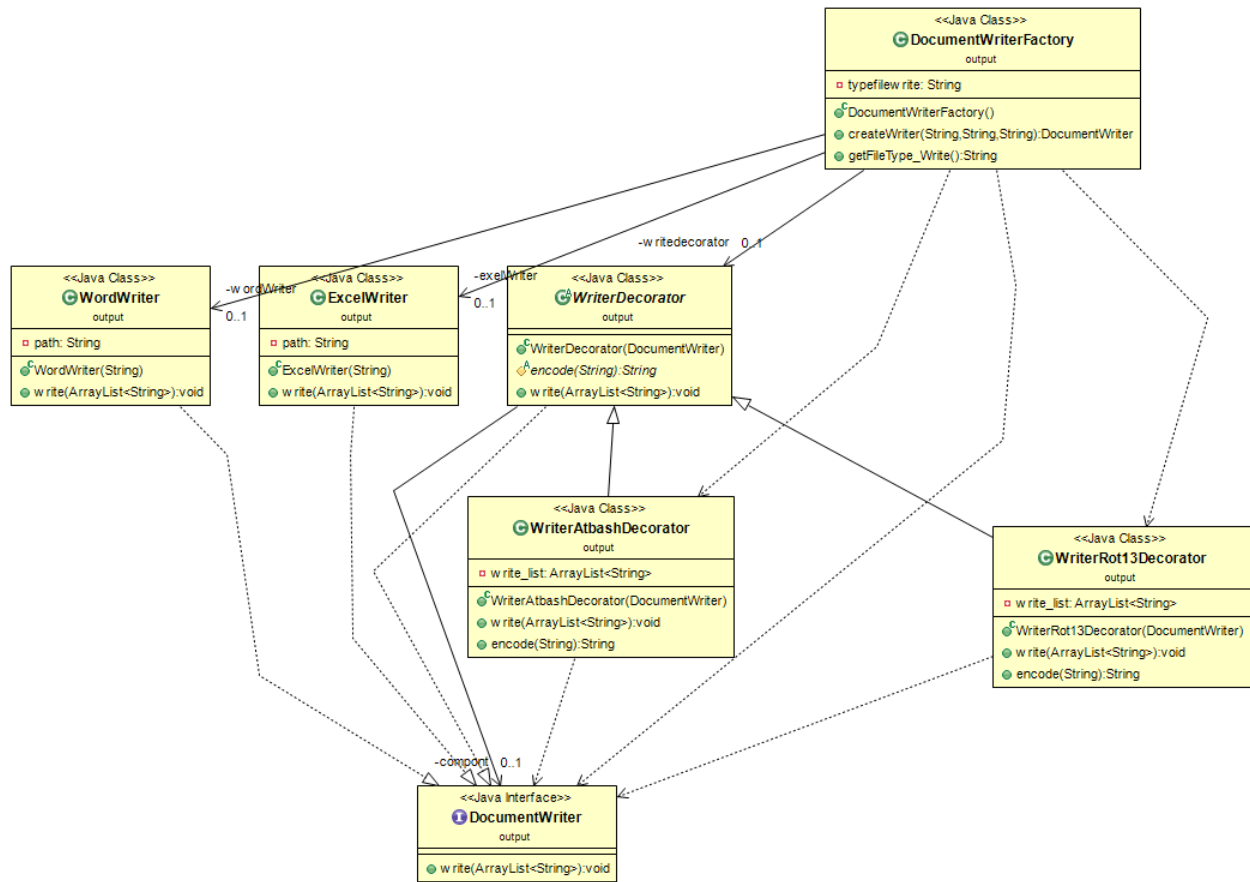

FIGURE 6: UML OUTPUT PACKAGE CLASS DIAGRAM

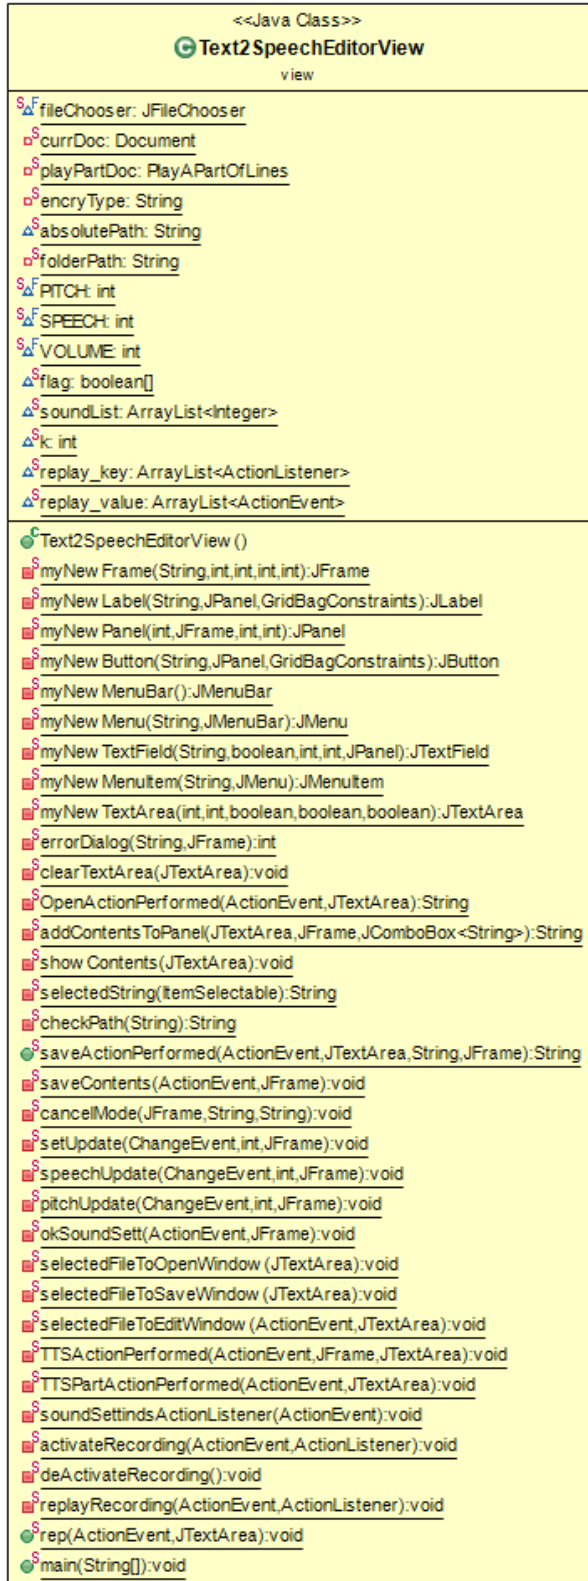

FIGURE 7: UML VIEW PACKAGE DIAGRAM

Below are the classes of the system in a CRC form to observe their responsibilities regarding the functionality of system and their collaboration in order to be operational. So the application can be functional and run without problems.

Class Name: CommandsFactory	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>▪ Create Commands objects</li> <li>▪ Connects command actions with back-end</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>▪ Document</li> <li>▪ OpenDocument</li> <li>▪ NewDocument</li> <li>▪ EditDocument</li> <li>▪ SaveDocument</li> <li>▪ DocumentToSpeech</li> <li>▪ PlayAPartOfLines</li> <li>▪ SoundSettings</li> <li>▪ ReplayManager</li> <li>▪ Text2SpeechEditorView</li> </ul>

Class Name: DocumentToSpeech	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>▪ Transforms document content to speech</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>▪ Document</li> <li>▪ ReplayManager</li> </ul>

Class Name: EditDocument	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>▪ Edit the selected document</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>▪ Document</li> <li>▪ ReplayManager</li> </ul>

Class Name: OpenDocument	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>▪ Open the selected document from the disk</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>▪ Document</li> <li>▪ ReplayManager</li> </ul>

Class Name: PlayAPartOfLines	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>Plays a part of transformed document to speech</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>Document</li> <li>.ReplayManager</li> </ul>

Class Name: ReplayManager	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>Triggers the commands to a document</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>Document</li> <li>CommandsFactory</li> <li>DocumentToSpeech</li> <li>EditDocument</li> <li>OpenDocument</li> <li>PlayAPartOfLines</li> <li>SaveDocument</li> <li>SoundSettings</li> </ul>

Class Name: SaveDocument	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>Saves the document to disk</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>Document</li> <li>ReplayManager</li> </ul>

Class Name: SoundSettings	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>Creates the command settings</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>Document</li> <li>ReplayManager</li> </ul>

Class Name: DocumentReader	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>▪ Interface for read functionality</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>▪ ExcelReader</li> <li>▪ ReaderAtbashDecorator</li> <li>▪ ReaderDecorator</li> <li>▪ ReaderRot13Decorator</li> <li>▪ WordReader</li> </ul>

Class Name: DocumentReaderFactory	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>▪ Creates reader objects with typefile and encoding type</li> <li>▪ Connects input with commands functionalities</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>▪ WordReader</li> <li>▪ ExcelReader</li> <li>▪ ReaderAtbashDecorator</li> <li>▪ ReaderRot13Decorator</li> </ul>

Class Name: ExcelReader	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>▪ Opens an excel document</li> <li>▪ Reads its content</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>▪ DocumentReader</li> <li>▪ DocumentReaderFactory</li> </ul>

Class Name: ReaderAtbashDecorator	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>▪ Reads document and decodes with Atbash encoding type</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>▪ ReaderDecorator</li> <li>▪ DocumentReaderFactory</li> </ul>

Class Name: ReaderDecorator	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>▪ Opens and reads encoded documents</li> <li>▪ Decodes content with an encoding type</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>▪ DocumentReader</li> </ul>

Class Name: ReaderRot13Decorator	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>▪ Reads document and decodes with Rot13 encoding type</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>▪ ReaderDecorator</li> <li>▪ DocumentReaderFactory</li> </ul>

Class Name: WordReader	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>▪ Opens a word document</li> <li>▪ Reads its content</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>▪ DocumentReader</li> <li>▪ DocumentReaderFactory</li> </ul>

Class Name: Document	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>▪ Creates Document objects</li> <li>▪ Implements all the software functionalities</li> <li>▪ Connects Gui with back-end</li> <li>▪ Applies all commands to documents</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>▪ DocumentReader</li> <li>▪ DocumentReaderFactory</li> <li>▪ DocumentWriter</li> <li>▪ DocumentWriterFactory</li> <li>▪ Text2SpeechFactory</li> <li>▪ TTSTFacade</li> <li>▪ CommandsFactory</li> <li>▪ DocumentToSpeech</li> <li>▪ EditDocument</li> <li>▪ NewDocument</li> <li>▪ OpenDocument</li> <li>▪ PlayAPartOfLines</li> <li>▪ ReplayManager</li> <li>▪ SaveDocument</li> <li>▪ SoundSettings</li> <li>▪ Text2SpeechEditorView</li> </ul>

Class Name: TextToSpeechApi	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>Interface for speech parameters functionality</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>TTSFacade</li> <li>TextToSpeechFactory</li> </ul>

Class Name: TTSTFacade	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>Implements tune parameters</li> <li>Sets speech content as a VoiceManager object from the FreeTTS library</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>TextToSpeechApi</li> <li>TextToSpeechFactory</li> <li>Document</li> </ul>

Class Name: FakeTTSTFacade	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>Implements tune parameters</li> <li>Sets speech content as a VoiceManager object from the FreeTTS library</li> <li>Gets the tune parameters and apply to content</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>TextToSpeechApi</li> <li>TextToSpeechFactory</li> </ul>

Class Name: TextToSpeechFactory	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>Creates freetts objects</li> <li>Implements all speech functionalities</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>TextToSpeechApi</li> <li>TTSTFacade</li> <li>Document</li> </ul>

Class Name: DocumentWriter	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>▪ Interface for write functionality</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>▪ ExcelWriter</li> <li>▪ WordWriter</li> <li>▪ WriterAtbashDecorator</li> <li>▪ WriterDecorator</li> <li>▪ WriterRot13Decorator</li> </ul>

Class Name: DocumentWriterFactory	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>▪ Creates writer objects with typefile and encoding type</li> <li>▪ Connects output with commands functionalities</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>▪ ExcelWriter</li> <li>▪ WordWriter</li> <li>▪ WriterAtbashDecorator</li> <li>▪ WriterRot13Decortor</li> </ul>

Class Name: ExcelWriter	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>▪ Saves an excel document to the disk</li> <li>▪ Writes either new content to the document or the same exists</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>▪ DocumentWriter</li> <li>▪ DocumentWriterFactory</li> </ul>

Class Name: WordWriter	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>▪ Saves a word document to the disk</li> <li>▪ Writes either new content to the document or the same exists</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>▪ DocumentWriter</li> <li>▪ DocumentWriterFactory</li> </ul>

<b>Class Name: WriterDecorator</b>	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>▪ Writes and saves encoded documents</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>▪ DocumentWriter</li> </ul>

<b>Class Name: WriterAtbashDecorator</b>	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>▪ Writes the document and encodes with Atbash encoding type</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>▪ WriterDecorator</li> <li>▪ DocumentWriterFactory</li> </ul>

<b>Class Name: WriterRot13Decorator</b>	
<b>Responsibilities:</b> <ul style="list-style-type: none"> <li>▪ Writes the document and encodes with Rot13 encoding type</li> </ul>	<b>Collaborations:</b> <ul style="list-style-type: none"> <li>▪ WriterDecorator</li> <li>▪ DocumentWriterFactory</li> </ul>

<b>Class Name: Text2SpeechEditorView</b>
